## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Bioactive Materials market for 2018-2023. Bioactive materials are known for reacting with body tissues for adherence and are employed for the purpose of remodelling and repairing tissues. They have a strong capacity of reacting with tissues and fluids without causing any adverse impact on them. These materials are made from composites, ceramics, glass, and glass ceramics. Bioactive materials are employed in antibacterial products, cosmetics, pharmaceuticals, medical care, and dental care. These materials can easily bind with tissues with the help of several types of attachments such as tissue replacement, bioactive fixation, biological fixation, and mechanical interlocks.

Rising demand for superior implantable materials is expected to drive the market growth over the next eight years. In addition, superior properties of the bioactive materials have facilitated rising substitution of the traditionally used implants, thereby driving growth. The growth of the orthopedic and dental surgeries on account of growth of ageing population has resulted in a rise in the demand for medical devices. Development of advanced technology bioactive materials leading to more feasible, safe and efficient implant procedures has led to an increase in the penetration levels leading to market growth. Fluctuating prices and demand-supply gap are the key issues faced by the industry in terms of raw material supply. The bioactive materials market is estimated to grow significantly in North America during the forecast period. Factors such as growing requirement for materials that permit easy tissue repair and regeneration to shorten hospital stays are key to market growth.

Over the next five years, LPI(LP Information) projects that Bioactive Materials will

register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
