Bioactive dressings are also known as airtight dressings because they prevent dryness of the wound surface. The dressing is a combination dressing made of high-molecular materials and biological materials by high-tech method, which is a hot spot in the research and development of wound dressings. The biosynthetic dressing has a two-layer structure, and the outer layer is coated with a polymer material to provide a barrier function corresponding to the epidermis; the main material selected for the inner layer is collagen, chitosan protective dressing and calcium alginate, which have biological properties. Compatibility, better water absorption, gas permeability, adhesion and antibacterial, hemostatic effect.

At present, the products listed mainly include hyaluronic acid, oral repair film and tissue skin repair film. Most companies are developing artificial bone, artificial skin, artificial blood vessel, artificial cornea, artificial nerve conduit and artificial organs. Wound management industry: Bioengineered skin and substitutes, seaweed dressings, and hydrogels are growing rapidly in the future.

In the field of new hygienic materials, more functional materials such as biodegradable, antibacterial and superabsorbent materials will be used to enhance the technology of disposable diapers, sanitary diapers, functional wipes and industrial wipes.
