In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Bioceramics market for 2018-2023.

Bioceramics referred to as ceramics that are used to repair and reconstruction of damaged or diseased parts of the musculo-skeletal system. These inclusively used in dental implants and in orthopedics to replace hard tissue in the body like bone and teeth. Alumina zirconia and a form of calcium phosphate known as hydroxyapatite are the common bioceramics used.

The increasing demand for healthcare facilities, technical advancement, rising disposable income, growing aging population and rising incidences of osteoarthritis are main factors contributing to the growth of market. Growing aging population has led to rising incidences of osteoarthritis, which will increase bioceramics consumption for knee and hip joint replacements and implants. North American regional market expected to grow in terms value. The reason being, growing research in bioceramics, rise in cancer occurrences, rise in occurrence of cardiovascular diseases in the United States and increasing R&D activities and funding in Canada. On the other hand, Asia Pacific regional market is growing at fastest pace in the orthopedic sector. This is mainly due to rapid growth of elderly population. China is the major consumer of Bioceramics Industry, as people are gaining access to advanced medical treatment.

Over the next five years, LPI(LP Information) projects that Bioceramics will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
