## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Biogas market for 2018-2023.

This report studies the Biogas market. Biogas is the gaseous product of anaerobic digestion, a biological process in which microorganisms break down biodegradable material in the absence of oxygen.

Biogas is comprised primarily of methane (50%–70%) and carbon dioxide (30%–50%), with trace amounts of other particulates and contaminants. It can be produced from various waste sources, including landfill material; animal manure; wastewater; and industrial, institutional, and commercial organic waste.

Biogas can also be produced from other lignocellulosic biomass (e.g., crop and forest residues, dedicated energy crops) through dry fermentation, co-digestion, or thermochemical conversions (e.g., gasification).

In the next several years, the global biogas production will maintain 5% average annual growth rate. It is expected in 2022 the biogas production will be around 80451 M CBM, and the operating plant will up to 38160 units.

Europe is the largest biogas production area. The European top 10 countries occupies 38.90% of the total biogas production, followed by China and USA, their biogas production respectively account for 31.25% and 24.73% in the total biogas production. Based on the existed market and policy environment, Chinese government should further to formulate the policy for industrial development. The existed price and subsidy policies still have some problems, the government should accordingly adjust the industrial development policy (the RPS, for example) to change the biomass power industry from “policy-oriented” to “market-oriented”. Hence, the upstanding policy

framework is an effective tool to guarantee the development of biomass power industry.

Over the next five years, LPI(LP Information) projects that Biogas will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
