In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Biogas Upgrading Equipment market for 2018-2023.

Biogas is a green energy source that is produced by anaerobic digestion of organic wastes. This breakdown of organic material produces biogas, which is composed of methane, carbon dioxide, and a few other elements.

The increasing demand for Biogas drives the global biogas upgrading equipment market. One of main factors contributing to the growth of market is rapid industrialization. With the development of industrialization, a large amount of fossil fuels is used in plants to generate electricity, the exhaust cause damage to people health and pose a threat urban life. Therefore, the demand for upgrading equipment can help not only improve productivity but also reduce the dependency on fossil fuels. The increase in adoption of natural gas vehicles is also expected to propel the biogas upgrading equipment market during the forecast period. The governments in countries like the US, the UK, Sweden, Italy and China are promoting the use of renewable natural gas. EMEA dominated the biogas upgrading equipment market. Most countries in the region have renewable energy targets, which are backed by government support through feed-in tariffs. The region has the highest number of biogas upgrading plants. Over the next five years, LPI(LP Information) projects that Biogas Upgrading Equipment will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
