In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Biologic Therapeutics market for 2018-2023.

Biologic therapeutics drugs are genetically engineered proteins derived from human genetic material. They contain sugars, proteins, nucleic acids, or complex combinations of these substances, or may be living entities such as cells and tissues. In addition, biologics drugs are derived from natural sources such as animals, humans, and microorganisms that are further utilized to make therapeutic products such as vaccines, blood components, and recombinant therapeutic proteins.

First and foremost, increasing reimbursement for biologics is predicted to positively influence the biologic therapeutics market in the upcoming years. Medical insurance companies and state-run insurance schemes are increasingly accepting claims against biologic therapeutics. Biologic therapeutics are gaining popularity due the efficacy of biologic therapeutic drugs and fewer side effects than chemical-based drugs. This is because biologic drugs are obtained from natural sources such as plants, or even living components such as cells and tissues of animals, microorganisms, or humans. These fragments are further treated to make therapeutic products such as blood components, vaccines, and recombinant therapeutic proteins.

Increasing prevalence of chronic diseases such as cancer, diabetes, and coronary artery diseases and a growing geriatric population are some other factors contributing to the biologic therapeutics market. In addition, mounting clinical trials and innovative research and development practices to develop novel drugs is boosting the growth of biologic therapeutics market.

On the flip side, manufacturing difficulties due to complexities of drug molecules is

challenging the growth of biologic therapeutics market. Nevertheless, increasing research and development in the pharmaceutical sector and rising applications of biologics is anticipated to provide new opportunities to this market.

Over the next five years, LPI(LP Information) projects that Biologic Therapeutics will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
