In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Biomass Pellets market for 2018-2023.

Biomass Pellets are made of agricultural and forestry residues such as rice stalk, straw, cotton stalk, bamboo sawdust, wood flour, ramie stalk, peanut husk, etc. They are produced by pellet machines or briquetting machines, after going through several processing procedures, such as crushing, drying, mixing, molding or compressing, etc. And the final products are pellets, bars, and briquettes, which are used as a replacement for coal, gasoline gas and other traditional fossil fuels. Biomass Pellet is a kind of renewable fuel. It is widely used in European countries.

As Chinese overall economic downward trend in the past few years, in the next few years there will be many uncertainties, and coupled with Biomass Pellets industry situation in the past few years, the current demand for Biomass Pellets product is relatively low.
