In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Biomethane market for 2018-2023.

Biomethane is a high-calorific methane extracted from biogas. It is a fully renewable, readily available, low-carbon alternative fuel that can be used to produce biomethane locally using organic waste.

Biogas is currently used in municipal gas networks and is an important part of the future “hybrid energy” system. Parker has extensive expertise in the measurement, control, filtration, dehumidification, cooling and drying of gases from biogas, biogas and landfills. Over the next five years, LPI(LP Information) projects that Biomethane will register a 6.0% CAGR in terms of revenue, reach US\$ 2870 million by 2023, from US\$ 2020 million in 2017.
