Biometrics technology is used for identification and authentication of people with the help of their biological and behavioral characteristics. An employee is asked for his user ID as soon as he logs into the retail PoS system. However, without typing in his password, he can simply scan his finger on the biometric fingerprint reader. Every time an employee tries to access a password-protected area, he is required to scan his finger. This leads to increased accountability, which ensures protection from accidental and intentional damage to the company's data.

The emerging technologies in the payment systems and increasing number of PoS terminals are the primary growth drivers of the Biometric PoS Terminals market. Also, the rise in fraud in merchant PoS terminals is one of the major factors which is driving the growth of biometric PoS terminals market as biometrics makes it very difficult for the fraud to obtain the sensitive information of the cards and thus, enhancing the security of the transactions. Apart from this, the increased usage of biometric PoS terminals in restaurants and the growth of the self-service market which includes retail check-outs and kiosks are the major factors which are fueling the growth of the biometric PoS terminal market. Moreover, the Biometric PoS Terminals helps to increase effectiveness and operational efficiency and thus, enhances the security of the payment systems, and due to this factor, many organizations are adopting biometric PoS terminals. During 2015, the fingerprint biometric segment dominated this market and accounted for close to 85% of the market share. Fingerprint biometric are easy to use and install which will

aid in the growth of this segment until the end of 2020.
