Biometric technologies are considered to be more reliable for authentication compared to physical devices and numeric codes. With advances in hardware, sensors, readers, pattern recognition, and signal and image processing technologies, a number of biometric technologies have been developed to deal with the identification of individuals. Establishing security in most organizations is of given a paramount importance by respective authorities. This is mainly done in order to keep maintain a veil of secrecy around most of the activities that take place in organizations such as government offices, federal agencies, defense establishments, and others from similar categories.
