The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Biometrics in Retail market for 2018-2023.

With the increasing level of competition day by day, consumer experience management has emerged as a key differentiator between competing organizations in the retail industry. The use of Biometric identification systems has ushered an era of prompt customized service, helping the customer to reap the benefits of technology and the organization to improve their bottom-line. Moreover, biometric access control system can also be used by retail industry to cut cost and improve efficiencies. The banking industry has already taken a big step in this direction by incorporating biometric technology in their IVR systems. This technology uses biometric voice identification to identify a customer. Once identification is done the customer detail like name, age, and other personal and banking details are pulled from the centralized database dispensing with the need to query the customer on their personal details. Besides improving the customer experience, based biometric IVR system increases the efficiency of the entire system by reducing the average handling time for each customer leading to lower operation costs and better bottom-line.

The increased instances of forgery and product thefts in the retail sector have increased the need for high-level security systems during the forecast period. Since the process of authentication in biometric systems is based on biological characteristics, such as fingerprint, facial, hand geometry, and vein patterns, their augmented implementation by organizations is envisaged to result in market growth during the predicted period. The advent of contactless biometrics is the key driver for the growth of this market. Recently, it has been observed that many organizations are reluctant to adopt contact biometric

solutions owing to increased instances of communicable diseases like Ebola and swine influenza. This reluctance has forced vendors to develop equipment like contactless fingerprint scanners that are suitable for organizations, which are specific about their hygiene standards. North America dominated the market share during 2017. The presence of many global restaurant chains and supermarkets in this region are envisaged to bolster growth in this geography during the estimated period. Over the next five years, LPI(LP Information) projects that Biometrics in Retail will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
