## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Biometrics in Workforce Management market for 2018-2023.

Biometrics is the technical term for body measurements and calculations. It refers to metrics related to human characteristics. Biometrics authentication is used in computer science as a form of identification and access control. It is also used to identify individuals in groups that are under surveillance.

With increase in the number of criminal activities related to critical infrastructure such as government institutions, healthcare facilities, and infrastructure in the transportation and BFSI sectors, demand for security technologies is on the rise. There is a need for highly reliable and accessible personal authentication and identification systems, and biometrics has emerged as a suitable solution. It is based on behavioural and physiological characteristics of individuals that are difficult to replicate. The adoption of biometric monitoring systems is gaining prominence worldwide in law enforcement, financial institutions, access control, immigration, national ID, time and attendance monitoring, border control, hospitals, retail, and airport security. The market share of APAC is estimated to increase during the forecast period because of government initiatives involving implementation of biometrics monitoring systems for various e-governance programs. The market share of Europe is expected to decrease during the same period due to a shift in preference to emerging biometric technologies such as DNA analysis, vein biometrics, and keystroke biometrics.

Over the next five years, LPI(LP Information) projects that Biometrics in Workforce Management will register a xx% CAGR in terms of revenue, reach US\$ xx million by

2023, from US\$ xx million in 2017.
