In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global BioPharma Cold Chain Packaging market for 2018-2023.

Packaging of products is the process of enclosing them for the purpose of their distribution, storage, sale, and use. Packaging also helps advertise a product in a better way and protect it from damage during transportation. Biopharma products are called as biological medical products, such as blood or blood components, vaccines, and tissues. These products require packaging to ensure their safety during transportation, to maintain sterility, and to prevent breakage or spillage and contamination.

The need for efficient packaging and transportation solutions in the biopharmaceutical industry primarily drives this market. Strict government regulations for packaging of biopharma products is impacting the market positively. FDA regulations in the US mandate the use of high barrier packaging materials and sealants for several liquid drugs. These drugs require packaging that exhibit impermeability, and chemicals and heat resisting capabilities. Governments in developing countries such as China and India are continuously upgrading their industry standards for packaging to maintain quality, safety, and to reduce breakage/spillage and contamination. This trend is likely to boost the demand for advanced biopharma chain packaging materials and logistics services during the forecast period. North America is the largest market in terms of consumption of pharma packaging, accounting for a market share of about 30% in 2017. In 2017, APAC accounted for 22% of the global market and is estimated to be the fastest growing biopharma cold chain packaging market.

Over the next five years, LPI(LP Information) projects that BioPharma Cold Chain

Packaging will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
