In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Bipolar Disorder Therapeutics market for 2018-2023.

Bipolar disorder, also known as manic depression, is a mental disorder that could lead to periods of depression and elevated mood. The treatment of bipolar disorder includes psychotherapy as well as medications such as mood stabilizers and antipsychotics. Rise in prevalence of bipolar disorder, high unmet medical needs, technological advancement and government initiatives are the key factors accelerating the growth of the bipolar disorder therapeutics market. Increase in investment in research and development and collaboration activities between companies for product development are the other factors likely to propel the bipolar disorder therapeutics market. Additionally, the rise in awareness about the disorder has led to increased understanding among the public. This has led to a rise in the number of individuals seeking medical attention for the treatment of the disorder. Also, strategic alliances formed between vendors help in increased penetration of the drugs in the market and increase market share. However, stringent regulations act as a major restraint of the bipolar disorder therapeutics market. North America dominates the global bipolar disorder therapeutics market due to new product innovation, increased awareness among people about bipolar disease, and rise in prevalence of bipolar disorders. Over the next five years, LPI(LP Information) projects that Bipolar Disorder Therapeutics will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
