The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Biotechnology Reagents market for 2018-2023.

Biotechnology reagents - used in the field of diagnosis, genetics, research, molecular biology, education, immunology, and bioscience – are compounds or substances used to synthesize, examine, or detect the presence of another substance to enable test reading. Biotechnology reagents comprise technologies such as cell culture, spectrometry, IVD, PCR, chromatography, expression and transfection, flow cytometry, and electrophoresis, and find application in areas such as immunophenotyping, fluorescent microscopy, DNA analysis, and cell cycle analysis.

The growing use of biotechnology reagents in therapeutics, commercial applications, and basic research is one of the foremost factors driving the global market. In addition, heavy investments in R&D activities, growing biomedical research, increasing number of biotechnology firms, and advancement in stem cell research have contributed to the growth of the biotechnology reagents market. The use of biotechnology reagents in the field of drug discovery is an emerging market where proteomics, DNA chips, combinatorial chemistry, and high throughput screening enjoy the spotlight. In contrast, high price of biopharmaceuticals is likely to restrain the growth of the biotechnology reagents market.

Contamination problems is one of the major factors hindering the biotechnology reagents market. Microbial contamination of incessant cell cultures by a varied diversity of microorganisms is challenging in cell culture laboratories globally, particularly by mycoplasma. The later can be problematic to distinguish, cultivate to high densities

without hostile effect on cell morphology, and can influence a wide variability of cell purposes, including altering retort to therapeutics.

North America dominates the global biotechnology reagents market and incurs the highest expenditure for global R&D. The United States accounted for the largest share of 73%, in 2016. The North American segment is on a rise, because of the ongoing research in biological sciences, considerable investments by various biotechnology companies, and the consistently increasing utilization of biotechnology reagents in the market. Due to the ongoing research and outsourcing activities in the field of life science, Asia-Pacific also has lucrative opportunities for growth over the forecast period. Over the next five years, LPI(LP Information) projects that Biotechnology Reagents will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
