Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Bismaleimide (BMI) Resins market for 2018-2023.

Bismaleimide (BMI) is yellow to brownish fine crystalline powder, which is a new class of thermosetting polymers that have gained huge acceptance in recent years due to their excellent thermal and electrical properties over a wide range of temperature.

Bismaleimide (BMI) is a prepolymer of BMI monomer.

Bismaleimide resins are a relatively young class of thermosetting polymers that are gaining acceptance by industry because they combine a number of unique features including excellent physical property retention at elevated temperatures and in wet environments, almost constant electronica properties over a wide range of temperatures and no flammability properties. Bismaleimide resin has become a leading class of thermosetting polyimides, though its share in PI is not as large as PEI, etc.

The largest consumption area of bismaleimide is composites, which accounted for 55.36% of world bismaleimide consumption. Adhesive and moldings are also in fast increase, but the share of composites would develop more quickly. The price of bismaleimide resin is low compared with other polyimide, but higher than epoxy resin. In the future, the price of bismaleimide would decrease, making it more competitive in advanced polymer market.

Over the next five years, LPI(LP Information) projects that Bismaleimide (BMI) Resins will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
