In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Bisphenol market for 2018-2023.

Bisphenol A is used in the manufacture of polycarbonate plastics and epoxies that are essential for a variety of consumer and industrial products, including many important applications related to public health and food safety.

Products made from bisphenol A meet high performance requirements. The epoxy resin made of bisphenol A is hard and easily adheres to the metal surface, making it an excellent protective coating material. Polycarbonate plastics made from bisphenol A are not easily broken, light weight, and have a high optical transparency similar to glass. Over the next five years, LPI(LP Information) projects that Bisphenol will register a 3.3% CAGR in terms of revenue, reach US\$ 17700 million by 2023, from US\$ 14500 million in 2017.
