In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Blind Spot Detection (BSD) System and Adaptive Cruise Control (ACC) System market for 2018-2023.

Blind Spot Detection (BSD) system is a sensor based detection system implemented in automobiles that is used for monitoring vehicles at the rear and side of the driver/vehicle. Such systems generate tactile, audible, vibrating or visual form of warnings. They also assist the driver at the parking lots when there are other vehicles approaching from the sides. Blind spots are caused due to various objects such as passengers, headrests and window pillars. Mirrors are generally used to remove the blind spots but the disadvantage being that they leave huge dead on all the sides of the vehicle. BSD systems, with the help of cameras and sensor systems generate information about various objects that are outside the range of driver's vision.

Adaptive cruise control is similar to conventional cruise control in that it maintains the vehicle's pre-set speed. However, unlike conventional cruise control, this new system can automatically adjust speed in order to maintain a proper distance between vehicles in the same lane. This is achieved through a radar headway sensor, digital signal processor and longitudinal controller. If the lead vehicle slows down, or if another object is detected, the system sends a signal to the engine or braking system to decelerate. Then, when the road is clear, the system will re-accelerate the vehicle back to the set speed.

The rising number of accidents due to increase in traffic flow is one of the prime reason that is contributing to the growth of BSD and ACC system market. The implementation of such safety systems by the automobile industry has rapidly increased. BSD and ACC

systems ensure safety of the passengers; customers are frequently looking for such advanced safety features and are also willing to pay.

Contributing to the growth of this market is the stiff competition among the automobile manufacturers. The manufacturers are continuously upgrading their models so as to cater to the huge demand of innovative safety features that can be used for various applications. The increasing use of sensors due to the advancements in technology is another factor that is contributing to the growth of this market.

Over the next five years, LPI(LP Information) projects that Blind Spot Detection (BSD) System and Adaptive Cruise Control (ACC) System will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
