In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Blockchain Enterprise Survey market for 2018-2023.

A blockchain, originally block chain, is a continuously growing list of records, called blocks, which are linked and secured using cryptography.

It is clear that companies across the board have a significantly greater understanding of blockchain technology than was the case 12 months ago. This stems in part from a surge in R&D (research & development) both internally and in partnership with third parties, with a recognition that blockchain has the potential to be deployed in a variety of use cases. As the number of research projects has increased so, too, has awareness, both amongst the participants and elsewhere in their industries, with competitor companies in turn beginning to consider whether they, too, should seek to gain competitive advantage from deployment.

Over the next five years, LPI(LP Information) projects that Blockchain Enterprise Survey will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
