## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Blood Glucose Monitoring Devices market for 2018-2023.

The global BGM devices market is growing due to the increase in the number of people with diabetes, especially type 1 diabetes. To avoid high doses of medication and insulin intake, these people are moving toward monitoring blood glucose levels by learning about the technicalities and the usage of BGM devices.

Global rise in the prevalence and incidence of diabetes and increasing adoption of continuous glucose monitoring (CGM) systems are the key factors propelling the growth of this market. In addition, continuous technological advancements in blood glucose monitoring devices and rapid growth in aging population are further stimulating the demand for blood glucose monitoring devices. However, inadequate reimbursement and high cost associated with the application of CGM systems and product recalls are some of the key factors hampering the growth of this market.

North America and Europe are anticipated to lead the global market on account of their large population plagued with diabetes, the region's rapidly increasing geriatric and obese population, and their high per capita expenditures on healthcare. The Asia Pacific market is expected to rise at a substantial rate during the forecast period ascribed to the populous nations of India and China. The market in Latin America and Middle East & Africa is likely to expand at moderate growth rate over the period of forecast.

Over the next five years, LPI(LP Information) projects that Blood Glucose Monitoring Devices will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
