In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Blood Pressure Monitoring Testing market for 2018-2023.

Blood pressure refers to force exerted by blood on the walls of blood vessels as the result of the heart pump. The systolic blood pressure defined as the highest pressure in the arteries when the hearts contracts while the diastolic blood pressure is defined as lowest pressure when the heart relaxes. Blood pressure monitoring devices used to understand the risks of blood pressure and help in management, measurement, and monitoring of the problems of blood pressure.

Increasing incidences of hypertension due to changing lifestyle is the key factor attributing towards the growth of the market over the forecast period. In addition, growing awareness and demand for home use BP monitors are expected to drive the industry growth in coming years. Furthermore, technological advancement such as mobile-based BP monitoring systems is anticipated to drive the industry growth. The demand for BP monitors is very high on account of growing geriatric population base and increasing the risk of high blood pressure among wide population base due to rising incidences of obesity & sedentary lifestyle. Asia displays a high CAGR owing to the rapidly increasing aging population in countries such as India, China, and Japan. The Americas also maintains a stable growth mainly due to reimbursements offered for specific equipment and the health policies of Medicaid and Medicare.

Over the next five years, LPI(LP Information) projects that Blood Pressure Monitoring Testing will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
