In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Blood Stream Infection Testing market for 2018-2023.

BSIs occur when any causative organism enters the bloodstream through a wound, injection, or during a surgical procedure. BSI testing is done to detect the cause of these infections.

Bloodstream infections are mostly diagnosed by blood culture tests and molecular tests. Commercially available tests are SepsiTest, SeptiFast, MagicPlex, VYOO, and PLEX-ID. The global bloodstream infection testing market is driven by the growing incidence and prevalence of burn/wounds cases, HIV, pneumonia, pyelonephritis, and cancer. Additionally, awareness about hygiene, diagnosis rate, unhealthy lifestyle, and increase in geriatric population are the potential factors for the market growth. On the other hand, rigid regulatory scenario regarding diagnosis procedures, high diagnosis cost, and lack of medical reimbursement may hinder the growth of the market during the forecast period. Innovations, R&D investments, mergers and acquisitions among the key vendors are the dynamics for the bloodstream infection testing market to progress. North America accounts for the largest market share of the global market owing to factors such as high infection rate, increase in awareness, high diagnosis rate, favorable medical reimbursement scenario, and developed medical facilities. It is followed by Europe in terms of market share. Asia Pacific is anticipated to hold the third largest market share owing to large population pool and poor hygienic sense. Latin America and Middle East & Africa are the silent contributors of the market. Over the next five years, LPI(LP Information) projects that Blood Stream Infection

Testing will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
