## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Blotting Systems market for 2018-2023.

Western blot, popularly termed as protein blot, is a widely used technique in proteomics. It enables researchers to study the structure and functions of the underlying proteins, precisely to identify the exact amino acid sequences in proteins. Understanding of cell signaling molecules is one of the many advantages that the western blotting technique offers. Growing investments by government and private research organisations in proteomics and other protein-related studies will remain a key factor bolstering the demand for western blotting in the near future. In terms of revenues, the molecular diagnostics field will continue to contribute a major share to the global western blotting market.

Protein research dynamics will remain a key factor positively influencing the market for western blotting. Growing prevalence of AIDS worldwide is expected to hold a major influence on the western blotting market growth on a global level. Amplifying investments by several leading biotechnology and pharmaceutical companies in proteomics R&D is a key factor primarily driving the market for western blotting technique.

In addition, surging M&A activities among leading companies is also anticipated to flavor the market. The recent past has seen emergence of several advances in the western blotting technique, including automated western blotting and imaging.

Moreover, advanced imaging software has also been introduced. These factors will continue to accelerate the market growth during the forecast period.

North America is poised to account for the largest share of the western blotting market,

followed by Europe and Asia-Pacific. However, the Asia-Pacific market is slated to grow at the highest CAGR during the forecast period. Factors such as development of bioclusters in China and India, growing pharmaceutical and biotechnology sector in Japan, growing funding for agriculture research in India, increasing government interest in biomedical & biotechnology industry in China, increasing diagnosis and related funding for HIV in Australia, and growing prevalence of HSV in south east Asia are expected to propel the growth of the western blotting market in the Asia-Pacific region. Over the next five years, LPI(LP Information) projects that Blotting Systems will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
