In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Blow Molded Plastic Bottles market for 2018-2023.

Blow molded plastic bottles are light weight plastic bottles which are produced by the process of molding plastic with machine blowing process to form plastic bottles, jars, and jugs. The process of molding is done by common blow molding technology used in different plastic such as polyethylene (PE), polyethylene terephthalate (PET), HDPE for molded plastic bottles requiring multi-layer technologies for moisture barrier requirements to improve product stability and compatibility. Primarily types of blow molding process that form blow molded plastic bottles include stretch blow molding, extrusion blow molding, compound blow molding and injection blow molding. One of the common and simplest blow molded plastic process involves extrusion blow molding which places a hot tube of plastic material placed in mold and air is injected through the top to form into molded shape. As the tube of hot plastic material touches the mold, the material freezes to form rigid shape.

The growing demand from healthcare sector for packaging medical products will drive the growth prospects for the global blow molded plastic bottles market for the next four years. Some of the major factors responsible for the growing demand for plastics in the healthcare industry is its inertness, versatility, durability, cleanliness, sterile nature, transparency, and lightweight. For instance, thermoformed plastics are used in airtight seals which protect the contents from moisture, particulate, and oxidants, whereas, medical polyethylene plastic injection molding sustains the lifespan of several medical devices such as disposable syringes.

Majority of the domestic market in Asia Pacific and the Middle East is unregulated and unorganized with several small and medium chain custom fabricators. The rapid expansion of producers has been posing a threat to large multinational corporations operating in the global market. They pose a challenge to the MNCs in terms of low-cost technology and price offering, thereby creating a gap in prices in the global market.

Over the next five years, LPI(LP Information) projects that Blow Molded Plastic Bottles will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
