The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Blow Molding Machinery market for 2018-2023.

Blow molding is the process of blowing air into a machine to form the shape of plastic products. The process was invented in the 1800s and popularized in the 1970s. Blow molding machinery is used to produce different plastics, including food and beverage containers (e.g. soda bottles) and personal care containers (e.g. shampoo bottles). There are three types of blow molding machines: extrusion, injection and stretch. Extrusion blow molding machinery The blow molding process begins with melting down the plastic and forming it into a parison or preform. The parison is a tube-like piece of plastic with a hole in one end through which compressed air can pass. There are lots of opportunities in the injection blow molding machine market. Injection Blow Molding Machine works on a revolutionary form of technology so we can modify this techniques as per our requirements. Injection Blow Molding Machine can produce a variety of products, so we can use this machine for producing lots of products. We can make this machine in such manner that this can produce multiple products. There are some restrains in the injection blow molding machine market such as, it is highly dependent on petroleum, like the gas industry, the blow molding sector highly relies on millions of gallons of petroleum to be able to produce plastic product. It creates a huge impact on the environment, as this technology depends greatly on petroleum and is an integral part in producing polymer, it carries a huge risk on the destruction of the environment. It requires a lot of production methods, it would need more resources and the process could not be streamlined, thus removing correspondence in the

process.

EMEA is expected to showcase a steadily increasing growth over the forecast period, with major demand arising from the food and beverage and construction industry in the region. The food and beverage sector will be the primary revenue generator for the market, driven by high standards of living and increased demand for packaged food and drinks. Also, EMEA creates the highest demand for alcoholic beverage packaging machinery, which creates significant revenue to the blow molding equipment market. Additionally, countries in the Middle East, the UK, and Germany have thriving construction industries, contributing further revenue to the market.

Over the next five years, LPI(LP Information) projects that Blow Molding Machinery will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
