In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Bone Cement market for 2018-2023.

Bone cement, also known as polymethylmethacrylate (PMMA) bone cement, is a self-curing. It provides elasticity by filling the space between prosthesis and the bone. It is a substance used in hip replacement surgery that acts as an adhesive to hold the artificial hip in place. It either comes in a pre-mixed form or as powders and liquids that are mixed in the operating room during surgery. Bone cements are utilized to reinforce stability in bones during an internal fixation surgery. It is also an essential component in many total joint arthroplasty procedures. In a cemented arthroplasty, the main functions of the cement are to immobilize the implant, transfer body weight and service loads from the prosthesis to the bone, and increase the load-carrying capacity of the prosthesis-bone cement-bone system.

China production of bone cement will reach 261.5 K Units by the end of year 2015. For demand market of bone cement, there is also a certain space in the next few years, especially in the Chinese market which is increasing with the rapid development of bone cement industry

Over the next five years, LPI(LP Information) projects that Bone Cement will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
