In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Bone and Mineral Diagnostic Testing market for 2018-2023.

Bone and mineral metabolism disorder is a collective term used to describe various conditions that make bones weak. Bone mineral metabolism maintains sufficient concentration of inorganic ions in blood serum. Progressive chronic kidney disease, especially end-stage renal disease (ESRD), is responsible for adverse changes in bone and mineral metabolism. Increase in serum parathyroid hormone levels due to fall in glomerular filtration rate is an indicator of bone disorder caused by chronic kidney disease. Reduction in kidney function leads to changes in bone mineral homeostasis and in levels of parathyroid hormone (PTH), 25-hydroxyvitamin D, 1,25-dihydroxyvitamin D, and fibroblast growth factor-23 (FGF-23). Disorders of mineral metabolism in chronic kidney disease (CKD) have been associated with higher mortality than anemia and inadequate dialysis.

The global bone & mineral market is driven by rise in geriatric population, need for early diagnosis to start treatment at its earliest, and increase in incidence of bone disorders. However, high cost of such tests and limited detection capability & inefficiency hamper the market growth. Development in automation of assay, and growth in public awareness towards personal and healthcare provides opportunities for the market growth.

Geographically, the Americas are expected to account for more than 50% of the total market share by 2019. High market dominion of this region can be attributed to the prevalence of diseases such as Paget's disease and osteoporosis in the US. Also, the

recent rise in laboratory automation and increased FDA approval for new products also boost the prospects for growth in this market during the forecast period. Over the next five years, LPI(LP Information) projects that Bone and Mineral Diagnostic Testing will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
