In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Bone Sonometers market for 2018-2023. A bone sonometer is a device that transmits ultrasound energy into the human body to measure acoustic properties of bone that indicate overall bone health and fracture risk. A bone densitometer is a device intended for medical purposes to measure bone density and mineral content by X-ray or gamma ray transmission measurements through the bone and adjacent tissues. The primary components of the device are a voltage generator, a transmitting transducer, a receiving transducer, and hardware and software for reception and processing of the received ultrasonic and rays signal. Currently, the mainstream market bone density measurement technologies are Dual Energy X-ray Absorptiometry (DEXA, also known as DXA) and Ultrasound. On the basis of type, the bone sonometer market is segmented into DEXA, ultrasound, other. The DEXA is expected to account for the larger share of the global market in 2015. End-users, included in this market are clinic, hospital, health center, and other usage. The hospital application is expected to account for the largest share of the global market in 2015.

Over the next five years, LPI(LP Information) projects that Bone Sonometers will register a 3.5% CAGR in terms of revenue, reach US\$ 510 million by 2023, from US\$ 410 million in 2017.
