Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Brachytherapy Devices market for 2018-2023.

Brachytherapy is referred to as sealed source radiation therapy because the radiation source is sealed and placed inside or near the body part requiring radiation therapy. Besides the treatment of most body part tumors, brachytherapy is commonly used to treat the cancers of the cervix, breast, skin, and prostate. The radiation source is enclosed in a protective wire or a protective capsule and ionizing radiations escape to treat the surrounding cancerous tissues only while avoiding its effects on body fluids. Majority of the low- and middle-income countries lack access to cancer treatment, which is expected to provide wide opportunities for brachytherapy firms. The market is anticipated to witness technological breakthroughs and increasing efficiency for treating various types of cancer during the forecast period.

Another factor driving growth of brachytherapy globally is availability of favorable reimbursement pathways and funding to provide quality healthcare facilities in low- and middle-income countries. Supportive pathways, such as National Health Insurance (NHI) Program and private healthcare reimbursement systems, cater the basic healthcare needs of low- and middle-income countries.

North America brachytherapy devices market is anticipated to lead the overall market vis-a-vis revenue by the end of 2017, and the region is expected to hold on to its dominant position until the end of 2022. The TMR report projects North America to be the most attractive regional market for brachytherapy devices, which is likely to expand at a CAGR of 4.7% between 2017 and 2022. Europe is another key market for brachytherapy devices mainly due to a modern healthcare infrastructure and an

increasing prevalence of cancer. However, Japan is expected to display the second-leading CAGR of 4.2% between 2017 and 2022. This is mainly because of meticulous research for treatment of cancer and efforts for the development of equipment for the treatment of the condition.

Over the next five years, LPI(LP Information) projects that Brachytherapy Devices will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
