The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Breast Cancer Monoclonal Antibodies market for 2018-2023.

Breast cancer is characterized by the malignancy of cells in the tissues of the breast. HER-2 breast cancer is the most common type of breast cancer. The HER-2 protein, present on the surface of normal breast cells, affects the growth of the malignant cells. The uncontrolled synthesis of this protein stimulates the growth and division of malignant cells.

The breast cancer monoclonal antibodies (mAbs) market is one of the fastest-growing segments of the global mAbs market and has gained major research significance among biotech and pharmaceutical companies due to the presence of high unmet needs in this area. Antibodies are increasingly becoming the best choice to treat cancers, including breast cancer. The use of antibody-drug conjugates (ADCs), including radioimmunotherapy and antibody-directed enzyme prodrug therapy, is increasing rapidly. ADCs are highly effective cytotoxic drugs linked to mAbs. These drugs have shown to be potent and efficient in treating breast cancer. This has propelled vendors to focus on novel technologies such as Seattle Genetics (SGEN), ImmunoGen (IMGN), and Immunomedics (IMMU). The rising use of these antibodies in drug development increases revenue generation in the breast cancer mAbs market, contributing to market growth.

The breast cancer mAbs market in APAC will witness a high growth rate during the forecast period due to the better market penetration of breast cancer mAbs and biosimilars in emerging economies, especially in Japan, Australia, India, South

Korea, and China. The rising number of initiatives undertaken by major vendors to assist patients in these countries is a significant contributor to the rise in sales of breast cancer mAbs in these countries. Moreover, the growing awareness about breast cancer and the available treatment alternatives will also propel growth prospects for the market growth in APAC.

Over the next five years, LPI(LP Information) projects that Breast Cancer Monoclonal Antibodies will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
