Gas cartridges generally comprise a mixture of propane and butane contained under high pressures. Gas cartridges are generally made of metal for better storage functions. Furthermore, only butane gas equipped cartridges are also available in the market. Some of the major advantages butane gas cartridges provide to end users include their highly portable nature and light weight. Another coveted quality of butane gas cartridges include the ability to effectively monitor and control the flame, which dismisses multiple safety concerns surrounding these devices. The pressure in the butane gas cartridges is generally released by opening of a stove valve. Generally gas fuels are being preferred over liquid fuel cartridges owing to less weight and gas fuels burns cleaner than liquid or solid fuels.

In terms of application, the butane gas cartridges market has been classified into medical, stoves, food & beverage, and others (Metal Working, Plastic Industry etc.).
