## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Cadmium market for 2018-2023.

Cadmium is a chemical element with symbol Cd and atomic number 48. This soft, bluish-white metal is chemically similar to the two other stable metals in group 12, namely zinc and mercury. Like zinc, it demonstrates oxidation state +2 in most of its compounds, and like mercury, it has a lower melting point than the transition metals in groups 3 through 11. Cadmium and its congeners in group 12 are often not considered transition metals, in that they do not have partly filled d or f electron shells in the elemental or common oxidation states. The average concentration of cadmium in Earth's crust is between 0.1 and 0.5 parts per million (ppm).

In future, the cadmium industry in the world will turn concentrated. The world cadmium consuming market will still have a certain amount of growth. Global competition is likely to turn to the relationship of competition and cooperation. With the development of economy, cadmium has huge market potential in the future. The market for cadmium is anticipated to witness strong growth during the forecast period owing to its numerous applications. Solar cell manufacturing can offer substantial growth to the cadmium market in the near future.

Over the next five years, LPI(LP Information) projects that Cadmium will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
