In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Calcium Cyanamide market for 2018-2023.

Calcium cyanamide is a chemical compound used in industrial agricultural fertilizers. The fertilizer calcium cyanamide helps plants to reach high yields, thus maximizing profits for farmers. The chemical is applied directly to the soil, where it breaks down into ingredients that are beneficial to plant growth. Calcium cyanamide also functions in other facets in addition to being a fertilizer.

The global average price of calcium cyanamide is in the decreasing trend in the last three years, from 608 USD/MT in 2011 to 499 USD/MT in 2015. Prices rose sharply due to the decline in Chinese calcium carbide reduction.

The use of calcium cyanamide in the downstream application is fertilizer and pesticide, most used in fertilizer, resulting in calcium cyanamide manufacturers bargaining power is weak, limiting the manufacturers of large-scale production

Over the next five years, LPI(LP Information) projects that Calcium Cyanamide will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
