In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Calcium Gluconate market for 2018-2023. Calcium gluconate, manufactured by the neutralization of gluconic acid or glucose with calcium carbonate, is an ideal source of calcium, a vital ingredient for strong bone and teeth formation. It also helps to maintain a regular heartbeat and transmission of nerve impulses.

In consumption market, the growth rate of global consumption is smooth relatively. China and India are still the mainly consumption regions due to the advanced production technology and wide range of downstream areas.

Calcium gluconate can be classified as two major types: food grade and pharmaceutical grade. It can be widely used in many industries. The food industry is the major consumption market. With the development of economy, these industries will need more calcium gluconate. So, calcium gluconate has a huge market potential in the future.

The major raw material for calcium gluconate is calcium carbonate, glucose, etc. On the global market, supply of raw materials is full. Fluctuations in the price of the upstream product will impact on the production cost of calcium gluconate industry.

We tend to believe this industry is a promising industry, and the consumption increasing degree will show a smooth growth curve. For product prices, the slow downward trend in recent years will maintain in the future as competition intensifies. Besides, prices gap between different brands will go narrowing gradually. Also, there will be fluctuation in gross margin.

Over the next five years, LPI(LP Information) projects that Calcium Gluconate will

register a 3.2% CAGR in terms of revenue, reach US\$ 100 million by 2023, from US\$ 81 million in 2017.
