## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Capillary Rheometer market for 2018-2023.

Capillary rheometry has its origins in polymer melt processing, but is also directly relevant to many other material processes such as high speed coating and printing applications. Based on controlled extrusion of a test material, capillary rheometry enables material flow and deformation properties to be characterized under conditions of high force (or pressure), high shear rate and at elevated temperature.

In consumption market, the growth rate of global consumption is smooth relatively. North America and Europe are still the mainly consumption regions due to the advanced production technology and rapid development of economy. The consumption of North America are accounting for 22.25% while the Europe are accounting for 20.14%. Capillary Rheometer can be classified as two types, such as Single-barrel and Multi-barrel. It can be widely used in many industries. Such as thermoplastic resin, thermosetting resin, copier toner, rubber material, ceramic material, food, cosmetics, medicine, coating, ink, fiber and so on.

Over the next five years, LPI(LP Information) projects that Capillary Rheometer will register a 4.1% CAGR in terms of revenue, reach US\$ 36600 million by 2023, from US\$ 28800 million in 2017.
