In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Carbazole market for 2018-2023.

The carbazole is mainly stored in coal tar, and the high temperature coal tar contains about 1.5% carbazole. Due to its high boiling point and high solubility in pyridine, dialkyl sulfoxide or dialkyl formamide, it can be separated by distillation and extraction, or it can be extracted and distilled with ethylene glycol. When pyridine is obtained, the pyridine mother liquor is obtained, and after concentration and crystallization, pure carbazole can be obtained.

With the development of science and technology, the use of carbazole has gradually been developed, and the market is in the growth stage, mainly used in the fields of synthetic dyeing (pigment), pesticides, medicine, photoelectric new materials and synthetic resins.

Over the next five years, LPI(LP Information) projects that Carbazole will register a 4.7% CAGR in terms of revenue, reach US\$ 120 million by 2023, from US\$ 90 million in 2017.
