In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Carbon Capture & Sequestration market for 2018-2023.

Carbon Capture & Sequestration is the process of capturing waste carbon dioxide (CO₂) from large point sources, such as fossil fuel power plants, transporting it to a storage site, and depositing it where it will not enter the atmosphere, normally an underground geological formation.

Growing needs for alternative energy sources, increasing focus to reduce CO₂ emission, re-usage of captured CO₂ by industries, formulation of relevant standardization and legalization and increasing investment by government to develop advance carbon capturing and storage technologies are some factors, that will propel the demand for carbon capture & sequestration over the next five years.

Over the next five years, LPI(LP Information) projects that Carbon Capture & Sequestration will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
