The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Carbon Tetrachloride (CTC) market for 2018-2023.

Carbon tetrachloride, also known by many other names (the most notable being tetrachloromethane, also recognized by the IUPAC, carbon tet in the cleaning industry, Halon-104 in firefighting, and Refrigerant-10 in HVACR) is an organic compound with the chemical formula CCl₄. It was formerly widely used in fire extinguishers, as a precursor to refrigerants and as a cleaning agent. It is a colourless liquid with a "sweet" smell that can be detected at low levels. It has practically no flammability at lower temperatures.

US EPA is the main supervision organization of CTC, due to the harmful to ozone layer. US CTC production is relatively stable from 2014 to 2017, while it met a large growth rate of 18.8% in 2013-2014.

Now the market purity is all above 99.0%, 98% product is hardly to be found.

The key consumption areas are like PCE feedstock, HFC feedstock, Incineration, Methyl chloride production, Others (DVAC, reagent etc.). Top 2 application takes about 60% of the total usage.

Over the next five years, LPI(LP Information) projects that Carbon Tetrachloride (CTC) will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of Carbon Tetrachloride (CTC) market by product type, application, key
