Carvone is a member of a family of chemicals called terpenoids. Carvone is found naturally in many essential oils, but is most abundant in the oils from seeds of caraway (*Carum carvi*), spearmint (*Mentha spicata*), and dill. Natural D-carvone is founded in mandarin peel oil, while L-carvone is found in ginger grass oil. Carvone can be classified as L-carvone and D-carvone based on its chemical structure. Gum makers producing a spearmint product have a choice of flavoring with spearmint oil, natural L-carvone (derived from spearmint oil), synthetic L-carvone (from citrus fruits) or combinations, L-carvone is often used to enhance spearmint oil. Since there are not enough spearmint crops to satisfy the demand of spearmint flavor, including L-carvone, the synthetic carvone is more popular in consideration of stable supply and cheaper price. Currently L-carvone is the dominant type of carvone sold on the market, and 81.39% of carvone is L-carvone in 2015.

Over the next five years, LPI(LP Information) projects that Carvone will register a 4.1% CAGR in terms of revenue, reach US\$ 56 million by 2023, from US\$ 44 million in 2017.
