Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Cell Sorting market for 2018-2023. Cell sorting is the ability to separate cells according to their properties. These properties can be described as intracellular (inside the cell) or extracellular (outside the cell). Intracellular processes can include DNA, RNA and protein molecule interaction, whereas extracellular physical properties include size, shape (morphology), and surface protein expression.

Europe has the largest EMEA import quantity in Cell Sorting market, while the Middle East is the second sales volume market for Cell Sorting in 2016.

In the industry, Becton, Dickinson and Company profits most in 2016 and recent years, while Beckman Coulter and Bio-Rad Laboratories ranked 2 and 3. The market share of them is 36.33%, 26.22% and 14.25% in 2016. The gap of market share is keep on enlarged due to different strategy.

Nowadays, there are three mainly types of Cell Sorting, including Fluorescent Activated Cell Sorting, Magnetic-activated Cell Sorting and MEMS - Microfluidics. And Fluorescent Activated Cell Sorting is the main type for Cell Sorting, and the Fluorescent Activated Cell Sorting reached a sales volume of approximately 112 Unit in 2016, with 39.86% of EMEA sales volume.

Cell Sorting technology is not much mature now, and new enterprises can not surpass existing famous brands on reputation or design in the short term. So, the study group recommends the new entrants need to be considered carefully before enter into this field.

Over the next five years, LPI(LP Information) projects that Cell Sorting will register a

xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
