Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Ceramic Capacitor market for 2018-2023. A ceramic capacitor is a fixed value capacitor in which ceramic material acts as the dielectric. Ceramics were one of the first materials to be used in the producing of capacitors, as it was a known insulator. It is constructed of two or more alternating layers of ceramic and a metal layer acting as the electrodes. The composition of the ceramic material defines the electrical behavior and therefore applications.

Much geometry were used in ceramic capacitors, of which some, like ceramic tubular capacitors and barrier layer capacitors are obsolete today due to their size, parasitic effects or electrical characteristics. Ceramic capacitors are usually made with very small capacitance values, typically between 1nF and 1 μ F, although values up to 100 μ F are possible. Ceramic capacitors are also very small in size and have a low maximum rated voltage. They are not polarized, which means that they may be safely connected to an AC source. Ceramic capacitors have a great frequency response due to low parasitic effects such as resistance or inductance.

In 2014, Ceramic Capacitor market managed to increase sales in worldwide, by 11% percent to 10.67 Billion USD. In the next five years, the global consumption of Ceramic Capacitor will maintain a 3% annual growth rate, consumption is expected in 2020 will be 4674 Billion Units. Therefore, in the next five years, Ceramic Capacitor overcapacity situation will not change much; the average operating rate will remain at 79% to 82%. The technical barriers of Ceramic Capacitor are existed apparently, and the Ceramic Capacitor market concentration degree is relatively high. The key technology and higher level products are in the hand of the global leading enterprise like MURATA, Samsung Electro, TDK Corporation, Kyocera, Vishay, Yageo, Feng Hua and EYANG, etc.

Over the next five years, LPI(LP Information) projects that Ceramic Capacitor will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
