In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Chelate Resins market for 2018-2023.

Chelating resins are styrene-divinylbenzene polymers to which iminodiacetate groups are introduced. This functional group forms complexes with all the metallic elements except the alkali metals.

Chelate resins, belonging to the family of iron exchange resin, are styrene-divinylbenzene polymers to which iminodiacetate groups are introduced. This functional group forms complexes with all the metallic elements except the alkali metals. Each manufacturer has his own brand series products to clients.

As for the application, chelate resins are used to remove base metals, boron, mercury and so on. There is no doubt that chlor-alkali industry owns the largest application share, which was 43.80% in 2016, followed by chemical industry with 26.51% market share. Besides the two major applications, uses in other fields are also expanding, indicating a promising market.

Global production of chelate resin reached to 7562 MT in 2016, from 7043 MT in 2012. North America is the largest production base of chelate resin, which accounted for 34.34% share globally in 2016. Europe is the follower, with 2016 MT produced.

Over the next five years, LPI(LP Information) projects that Chelate Resins will register a 2.1% CAGR in terms of revenue, reach US\$ 100 million by 2023, from US\$ 91 million in 2017.
