In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Circuit Breaker market for 2018-2023.

A circuit breaker is an automatically operated electrical switch designed to protect an electrical circuit from damage caused by excess current from an overload or short circuit. Circuit breakers may also be used in the event of pre-existing damage to electrical systems. Its basic function is to interrupt current flow after a fault is detected. Unlike a fuse, which operates once and then must be replaced, a circuit breaker can be reset (either manually or automatically) to resume normal operation.

The market in Asia Pacific led the global circuit breaker market in 2017. The circuit breaker market has been analyzed with respect to 5 regions namely Asia Pacific, Europe, North America, the Middle East & Africa, and South America. The market in Asia Pacific is currently the largest for circuit breakers followed by the North American market. Rising investments in construction and developmental activities and increasing electricity demand are driving the circuit breaker market in Asia Pacific.

Over the next five years, LPI(LP Information) projects that Circuit Breaker will register a 4.9% CAGR in terms of revenue, reach US\$ 8810 million by 2023, from US\$ 6630 million in 2017.
