Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Circulating Tumor Cells (CTCs) and Cancer Stem Cells (CSCs) market for 2018-2023.

Circulating tumor cells (CTCs) are tumor cells that detach from the primary tumor and travel in the bloodstream, spreading from the original tumor to other locations, leading to cancer metastasis. These cells exist in peripheral blood of cancer patients and detection of CTCs can help to determine the process of metastasis. In contrast with other blood cells, the number of CTCs is very rare in blood which makes them difficult to detect.

Cancer stem cells (CSCs) are cancer cells that have all the classical properties of normal stem cells. Specifically, they are able to both give rise to more copies of themselves and to give rise to all cell types found in the cancer.

According to the research, the most potential market in the main countries of circulating tumor cells (CTCs) and cancer stem cells (CSCs) industry is China, determined by the rising level of medical care. Besides, South America, Asia-Pacific should also be focused by the investors. They are the potential consumers of circulating tumor cells (CTCs) and cancer stem cells (CSCs).

The CellSearch test is the only FDA-approved test for CTC assessment. For the moment, the products are not comprehensive, and technologies are not stable. Morbidity and mortality rate of cancer is rising at a faster speed worldwide and thus prevention of cancer and cancer treatment is grabbing attention of cancer researchers globally. Stem cells and cell therapy have shown significant potential to treat cancer

effectively.

Over the next five years, LPI(LP Information) projects that Circulating Tumor Cells (CTCs) and Cancer Stem Cells (CSCs) will register a 22.5% CAGR in terms of revenue, reach US\$ 21700 million by 2023, from US\$ 6420 million in 2017.
