## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Cladding Systems market for 2018-2023.

Cladding systems. Wall cladding means that the exterior of a building is covered with panels of a different material than they cover up. To maintain the structure, frame and exterior walls of a building, certain panel systems are applied. The panels are installed over other materials used in construction.

Vinyl accounted for the largest market share in 2017. This is because of its low cost and easy installation techniques. Vinyl siding is the most preferred siding for residential buildings. Vinyl siding is durable and can last for up to 30 to 40 years. Also, growing construction projects, both residential and commercial, have driven the market in this segment. Other cladding materials include stone & brick, wood, stucco & EIFS, metal, and fiber cement.

Over the next five years, LPI(LP Information) projects that Cladding Systems will register a 7.0% CAGR in terms of revenue, reach US\$ 259900 million by 2023, from US\$ 173600 million in 2017.
