In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Clinical Decision Support Systems market for 2018-2023.

A clinical decision support system (CDSS) is a health information technology system that is designed to provide physicians and other health professionals with clinical decision support (CDS), that is, assistance with clinical decision-making tasks. On the basis of delivery mode, the CDSS market is segmented into integrated and standalone systems. Integrated CDSS segment accounted for the largest share of the CDSS market, by product, in 2017 and also witness the highest growth during the forecast period. The large share and high growth of the segment can be attributed to the growing deployments of integrated CDSS.

On the basis of delivery mode, the CDSS market is segmented into on-premise and cloud-based systems. Cloud-based CDSS segment is expected to register the highest CAGR of the global CDSS market during the forecast period. The high growth of the segment can be attributed to the comparatively lower capital expenses and operational costs incurred in this model, alongside its scalability, flexibility, and affordability.

Over the next five years, LPI(LP Information) projects that Clinical Decision Support Systems will register a 11.8% CAGR in terms of revenue, reach US\$ 1710 million by 2023, from US\$ 880 million in 2017.
