In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Cloud Encryption market for 2018-2023.

Cloud storage providers offer cloud encryption services to encrypt data before it is transferred to the cloud for storage. Typical cloud encryption applications range from encrypted connections to limited encryption only of data that is known to be sensitive (such as account credentials) to end-to-end encryption of any data that is uploaded to the cloud. In these models, cloud storage providers encrypt data upon receipt, passing encryption keys to the customers so that data can be safely decrypted when needed. The report covers the present scenario and the growth prospects of the cloud encryption software market. To calculate the market size, the report considers the revenue generated from the sales to end-users such as BFSI, manufacturing, professional services, healthcare, government, and others.

Over the next five years, LPI(LP Information) projects that Cloud Encryption will register a 52.1% CAGR in terms of revenue, reach US\$ 11600 million by 2023, from US\$ 940 million in 2017.
