In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Cloud Engineering market for 2018-2023.

Cloud engineering is the application of engineering disciplines to cloud computing. It brings a systematic approach to concerns of commercialization, standardization, and governance of cloud computing applications. In practice, it leverages the methods and tools of engineering in conceiving, developing, operating and maintaining cloud computing systems and solutions. It is about the process of designing the systems necessary to leverage the power and economics of cloud resources to solve business problems.

Retail and consumer goods is one of the fastest-growing verticals due to the need of a comprehensive cloud environment to offer their respective product and service portfolios to the customers. Cloud engineering helps in designing and implementing efficient solutions for seamless integration of multiple shopping channels and presenting a unique shopping experience to the connected consumers. The need to improve sales, customer satisfaction, brand image, and increasing the data generation is forcing the retail and consumer goods vertical to give up the traditional IT strategy.

Over the next five years, LPI(LP Information) projects that Cloud Engineering will register a 23.2% CAGR in terms of revenue, reach US\$ 17600 million by 2023, from US\$ 5040 million in 2017.
