In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Cloud High Performance Computing (HPC) market for 2018-2023.

High-Performance Computing (HPC) in the cloud has reached the mainstream and is currently a hot topic in the research community and the industry.
The major factors driving the growth of cloud HPC market are - complex applications management, emergence of big data market, and adoption of pay-as-you-go model.
High performance computing involves the computation of complex applications such as ultra-high definition workflows, electronic design automatic simulations, financial quantitative analysis, seismic analysis, and genome analysis that are related to weather forecasting, climate change, and space exploration. Cloud HPC assists in the computation of these complex applications by offering an advanced computing environment. Furthermore, with the benefits of pay-as-you-go model adoption, both SMBs and large enterprises are willing to spend more on cloud HPC.
Over the next five years, LPI(LP Information) projects that Cloud High Performance Computing (HPC) will register a 19.9% CAGR in terms of revenue, reach US$ 13200 million by 2023, from US$ 4460 million in 2017.

This report presents a comprehensive overview, market shares and growth opportunities of Cloud High Performance Computing (HPC) market by product type, application, key companies and key regions.
