## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Cloud Infrastructure Services market for 2018-2023.

Cloud Infrastructure refers to online services that provide high-level APIs used to dereference various low-level details of underlying network infrastructure like physical computing resources, location, data partitioning, scaling, security, backup etc. A hypervisor, such as Xen, Oracle VirtualBox, Oracle VM, KVM, VMware ESX/ESXi, or Hyper-V, LXD, runs the virtual machines as guests. Pools of hypervisors within the cloud operational system can support large numbers of virtual machines and the ability to scale services up and down according to customers' varying requirements.

Cloud infrastructure services are the services being offered by IT vendors specifically for cloud deployment. These services are IaaS, PaaS, CDN/ADN, Managed Hosting, and Colocation Services. The major vendors in this market are IBM, Cisco, Salesforce, Equinix, AT&T and others which offer cloud base services to envelop the whole private, public and community cloud spectrum. The infrastructure services can reduce the costs involved in buying, installing, upgrading, and maintaining the tools and services. The movement to the cloud based infrastructure services provides an elastic, scale, easy entry and lower per person access costs.

Over the next five years, LPI(LP Information) projects that Cloud Infrastructure Services will register a 10.9% CAGR in terms of revenue, reach US\$ 132500 million by 2023, from US\$ 71200 million in 2017.
